

Smart back-up alarm

White noise, Sound level automatically adjust

NBS BA82102

NBS BA82112

Safety on site

Backing vehicles pose a great danger to pedestrians and other users on construction sites.

To avoid collisions, reversing alarms are intended to alert people near vehicles when they step back. They prevent serious and even fatal accidents.

Self-adjusting white noise Back-up alarm

White noise/wideband alarms have advantages over typical tonal alarms:

- ❖ Sound automatically adjusts 5-10db above ambient noise
- ❖ Broadcast a range of frequencies that are easier to spot.
- ❖ Sound is more confined for people in areas that are most at risk.
- ❖ Reduced disturbance and noise pollution in the neighborhood.
- ❖ Features adjustable sounds for certain environments.
